

# Husco International and the Environment

## Husco Environmental Policy Statement

Husco is committed to conducting operations in a manner that is protective and respectful to our environment. The Husco International Environmental Management System (EMS) is a process by which we will meet this commitment. The Husco International Environmental policy applies to all Husco facilities.

The Husco EMS is founded upon three fundamental topics for which the management team strives to uphold:

1. Husco will comply with all relevant environmental regulations, legal and other requirements to which the organization subscribes.
2. Husco is committed to the prevention of pollution and the conservation of energy and natural resources.
3. Husco is committed to continual improvement by establishing and reviewing objectives and targets within the EMS.

The environmental impacts of the following topics are taken into consideration when managing Husco's Environmental System: greenhouse gas emissions, water quality and consumption, air quality, responsible chemical management, product circularity, animal/ecosystem welfare, biodiversity, land use, deforestation, soil quality, and noise emissions. Husco strives to partner with suppliers that share these values.

A handwritten signature in black ink that reads 'Austin Penrice'.
